

DIGITÁLNÍ ÉRA, „FULLDOME“ PROJEKCE

Fulldome 101:

Part 1 - Introduction to Fulldome Theaters

Ed Lantz

Visual Bandwidth, Inc.

Vortex Immersion Media, Inc.

1290 Baltimore Pike, Suite 111

Chadds Ford, PA 19317

Ed@visualbandwidth.com

www.vorteximmersion.com

www.visualbandwidth.com

Digital Dome or “Full dome” Theatre

Large-scale, real-time interactive
group immersive environments

- Large-format immersive cinema
- Real-time digital planetarium & visualization
- Multi-use auditorium and performance space

Full-dome Theaters

- Science Centers, Planetariums, Theme Parks
- Real-time interactive storytelling
- Group interactivity, interactive performances
- Used to convey a scientific world view
 - Cosmology & our place in the universe
 - Earth science and climate change
- SciArt
 - Sense of beauty, awe
 - “Overview Effect”

A New Medium!

- It's Video, Not Film
 - End-to-end 4k x 4k digital productions
- Relatively Affordable Productions are Possible
 - Live action 4k solutions emerging!
 - Animation with desktop tools
 - Spherical compositing tools available
 - Real-time interactive navigation
- Independent Productions
 - Experimentation by students
- “Cinema of the Future”

Immersive Display

Visual Display with Simultaneous High Resolution and Wide Field-of-View

- Excites Nearly the Entire Retina
- Strong Sense of Presence
- Invokes Opto-Vestibular Response in Brain
 - Thrill-ride or cybersickness possible
- Horizontal FOV $>140^\circ$, Vertical FOV $>40^\circ$

Fulldome Theater Breakdown

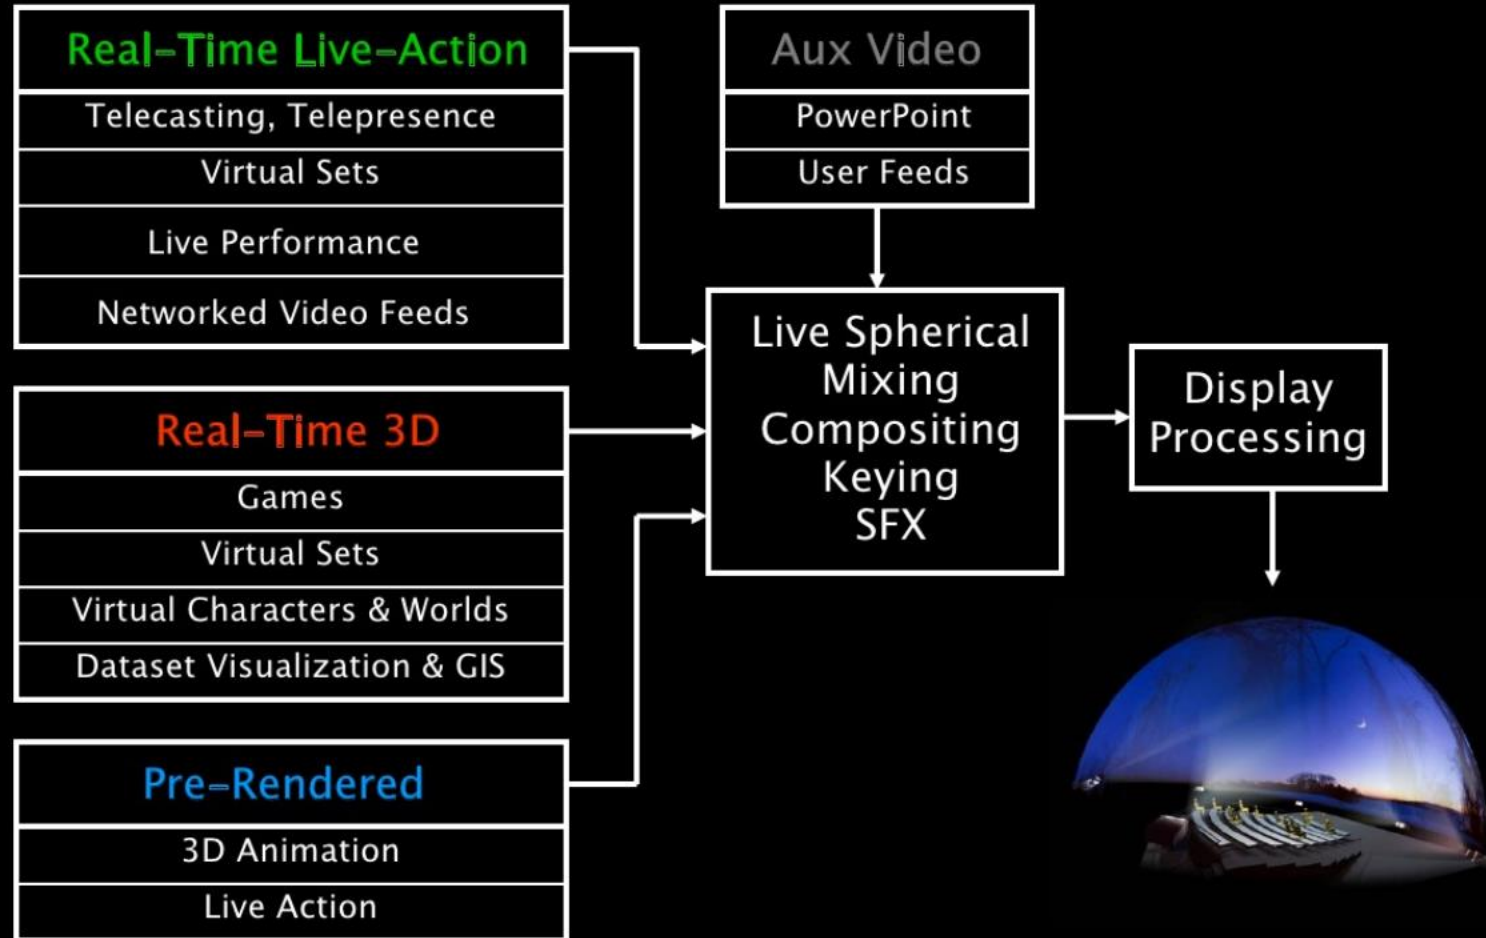

- 385 Theaters Worldwide
 - Half in U.S.
 - 32% are in Museums & Science Centers (US)
 - 22% are in School Districts (US)
 - 15+ million annual attendance
- 54% are Single-Lens Fisheye Systems
- Over 3000 Planetariums Worldwide
 - 110 million annual attendance
- Over 80 Show Titles

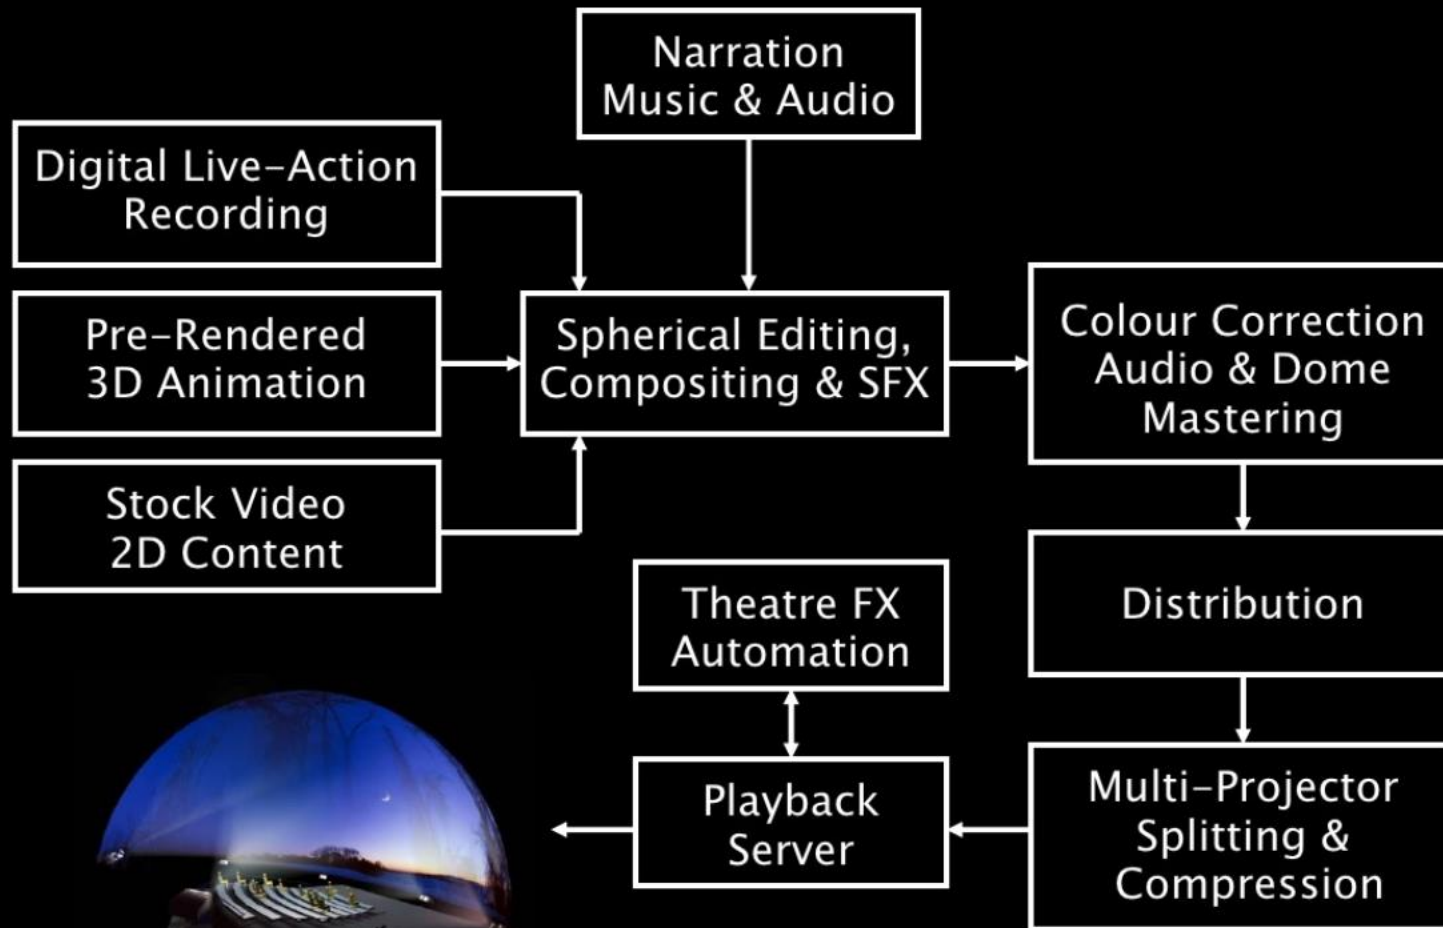

Fulldome Theaters Worldwide

Digital Dome or “Full dome” Theatres

Cinema of the Future?

- Most immersive of all cinema formats
- All digital workflow and real-time interactivity
- Group “reality- portals” into real and virtual worlds

How can digital domes thrive in the future media environment?

1. Deliver powerful yet meaningful out-of-home media experiences.
2. Strive for excellence in theater design, programming and operations.
3. Leverage collective power of stakeholders to promote and advance immersive media.
4. Converge with games, VR and LF cinema.

1. Deliver powerful yet meaningful media experiences.

- Identify and validate unique characteristics and advantages of group immersive environments.
- Align ourselves with meaningful social needs with an existing or emerging demand.
- Make a science out of meeting these needs by applying the unique strengths of fulldome.

Unique Characteristics of Group Immersive Environments (we think)

- Greater spatial understanding
 - Large- scale geometry, i.e. solar system
 - Geospatial awareness
- Data visualization
 - Data visualized as 3D spatial relationships
- Provide more deeply moving, compelling experiences (affective goals)
 - WOW factor
 - Journeys, stories, connections
 - Emotional connection
 - Transformative media

Meaningful social needs with an existing or emerging demand

- Earth Science and Environmental Responsibility
 - Earth is finite – we can alter the biosphere
 - Powerful tools of STEM must be used responsibly (STEM = Science, Technology, Engineering & Math)
- Cultural Heritage
 - Multicultural history, world heritage sites
- Building Bridges of Understanding
 - Fostering global, multicultural perspective
- Our Place in the Universe
 - What we know about our universe (data)
 - Meaning of the universe (stories)
- Art and Culture, Entertainment & SciArt

The Importance of Storytelling

Storytelling can open our perspectives to more brilliant possibilities.

- Susan O'Halloran

Stories are bridges from one mind to another.

- Martha Holloway

An enemy is one whose story we have not heard.

- Ms. Gene Knudsen Hoffman

Storytelling can change a room. It can change lives. It can change the world.

- Gwenda LedBetter

People become the stories they hear and the stories they tell.

- Elie Wiesel

The universe is made of stories, not of atoms.

- Muriel Rukeyser

The Importance of Music and Art

“Music has well established psychological effects, including the induction and modification of cognitive states, moods and emotions.”

- Dr. Norman M. Weinberger, MuSICA Research Notes, vIV #2, F97

Art and religion first; then philosophy; lastly science. That is the order of the great subjects of life, that's their order of importance.

- Muriel Spark

Art does not reproduce what we see; rather, it makes us see.

- Paul Klee

Art is the objectification of feeling, and the subjectification of nature.

- Susanne K. Langer

Art is the most intense mode of individualism that the world has known.

- Oscar Wilde

Art is the science of inducing unique neural states.

- Ed Lantz

Gaia Journeys

Real-Time SciArt Collaboration

- Classically trained violinist, Kenji Williams
- Denver Museum of Nature & Science Astronomer Ka Chun Yu
- Earth-based panoramas by Greg Downing
- Earth and space visualization by UNIVIEW
- Sold out 4 performances

Bella Gaia (next gen.)

A Narrative SciArt Experience

- A Tour of the World via ISS
 - Planetarium show, live concerts, DVDs
- Cognitive goals include understanding of:
 - Power of STEM tools to change the earth and improve lives
 - The many world cultures and their geography
 - The power of space science to better understand the world
 - The need to preserve world heritage sites
- Affective goals include appreciation of
 - The Earth itself as a heritage site
 - Global culture, music and environment
 - Geoscience and space technologies
 - Inspiration to use STEM tools wisely for benefit of humanity
- Seeking support from NASA, UNESCO, Smithsonian

Science of Fulldome Storytelling

- Leverage Existing Storytelling Knowledge
- Extend Cinematic Language for Fulldome
- Cognitive Research (need more)
- Neuroaesthetics – the science of art
- Refine Storytelling Techniques
 - Measure effectiveness
 - Peer review/ critique
 - Experiment with new modalities
- Pioneer Transformative Media

Pioneering Transformative Media

The Eyes and Ears as a Wideband Interface
to the Brain

Immersive Experiences are Powerful Tools
for Transformative Programming

Transformative Experience

An experience that substantially alters a person's "possibility space" or life path

- Discovering new facts, cultures, connections
- Epiphany, realization, revelation
- Spiritual, numinous, or "unity" experience
- Awakening to empathy, compassion, love
- Often triggered by new friends, social circles
- Trauma, loss, fear, etc. can also be transformative

transformed individuals = transformed world

Neural Plasticity

“You create your brain from the input you get”

- Dr. Paula Tallal

You also create your brain from your beliefs and expectations (or world view):

“Visual neurons in the brain's primary visual cortex - - long thought to conduct purely sensory, value-free visual information - - can also modulate their response as a function of expected reward. In a clever study that sharply revises the view of the fundamentals of how we see, Marshall Shuler and Mark Bear show that visual neurons once considered to be mere feature detectors are affected by complex cognitive influences such as reward expectancy. Even at the most fundamental level, it seems, our expectations influence how and even what we see.”

From Scientific American regarding:

Shuler and Bear, “Reward Timing in the Primary Visual Cortex” Science, 17 March 2006: 1606- 1609

Immersive Environments for Transformative Experiences...

30,000 B.C.E.
Chauvet Caves

1,500 B.C.E.

Amon, Egypt

16th Century
Sistine Chapel

1788
Barker's Panoramas

1826 Daguerre's
Panoramas

1895
Lumière Cinématographe

Transformative Media

Intentional use of digital media to:

Open the Mind

*Information, education,
Empowering truths bring new understanding*

Shift the Heart

*Empathy, compassion, understanding, fun
Emotional shift towards love, respect, joy, happiness*

Activate the Spirit

*Sense of awe, mystery, ecstasy, bliss, unity
Elevated quality of consciousness*

Soothe the Beast

Invoke positive moods, relaxation, regeneration, "digital spa"

Awaken the Senses

Arouse passions, sensuality, sexual ecstasy

Transformative Media

Transformative media modalities

- Cognitive
 - Intellectual realization
 - Transmitted through thoughts, facts, language
- Affective
 - Emotional or mood shift
 - Transmitted through storytelling, drama, music
- Many Unique States of Consciousness
 - Shift in “quality of consciousness,” perception, flow
 - Transmitted through beauty, awe- inspiring music and visuals, contemplation and reflection

Future Transformative Modalities

Experimental and proven biometric techniques that may some day find application in domes...

BrainPaint™

2. Strive for Excellence in our Theater Design, Programming and Operations

- Create and adopt industry standards & guidelines for fulldome displays, theater design, distribution
- Industry awards encourage quality programming
- Guidelines for theater design, programming standards, etc.
- Continued technology advancements

Fulldome Summit 2008

- First Fulldome Summit Held in Valencia in 2004
 - Special session of IPS 2004
 - 13 papers presented and published on fulldome standards
 - Standards roundtable
- Second Fulldome Summit in Chicago on July 3rd, 2008
 - Special session of IPS 2008
 - 14 Papers, 2 panels, 2 roundtables and one Keynote
 - Launch of IMERSA (Immersive Media Entertainment, Research, Science and Arts)
 - Standards roundtable
 - Integrated with DomeFest 2008
 - www.ips2008.org/fulldome

Full dome Technology Needs

- 4k x 4k Digital Fisheye Film Camera
- Need “Killer App” for Group Interactivity
- Real- Time VJ and Graphic Manipulation Software
- Better Auto- Alignment Systems for Tiling
 - Needs to be adopted by vendors
- Open Source Framework for 3D Datasets
 - “Model of the known universe” project collaborators
 - Also need framework for integrating simulations

3. Leverage our collective power to advance our profession and our perceived value.

- Work through professional organizations:
 - IPS, ASTC, GSCA, TEA, SIGGRAPH, IMERSA
- Adopt “official” fulldome standards and guidelines (IMERSA for domes, GSCA for LF film)
- Publish, communicate, network
- Consortia, teaming on grants, etc.
- Public relations for fulldome (IMERSA)
- Networked domes

IMERSA

Immersive Media Entertainment, Research, Science and Art Association

- IMERSA serves as a collective authority in immersive media by establishing and disseminating industry standards, guidelines and recommended practices.
- IMERSA advances the industry through fund and program development for research, arts, show production consortia and other programs serving common industry interests.
- IMERSA fosters professional development of its members by providing educational resources and programs, certifications, and recognition of outstanding achievements.
- IMERSA is a nexus for professional communication and collaboration, uniting venue operators with creative communities, researchers and manufacturers through events, online networking and an annual conference.
- IMERSA promotes industry research, including the collection of market and industry statistics, historical records, original research and product evaluations.
- IMERSA provides outreach to the media, the public and other trade organizations to raise awareness of and promote the immersive medium and its wide spectrum of venues, formats and functions.

Feeding the Dome: Democratizing the Universe

- The Universe is Too Big to Experience Firsthand
- The Universe can be Virtually Experienced through Datasets and Models
- Scientists have a Need and Responsibility to Make Scientific Data and Models Accessible to the Public so that They Too can Experience the Knowable Universe
 - Science, in this sense, is expanding the knowable universe, not just for scientists, but for all humanity
 - Non- scientists will add immeasurably to this knowledge base, providing meaning, context and “heart”

The universe is made of stories, not of atoms.

- Muriel Rukeyser

Turning Raw Data into Visualization

- Spatial and Temporal Continuity
 - Missing data must be extrapolated, interpolated, or guessed
 - Motions must be smooth with inertia
- Aesthetics, Understanding Trump Accuracy
 - Exaggeration, distortion, artistic license
 - Ordinarily coupled variables are separated

NASA Website

Will Wright's SPORE

AMNH's Digital Universe Atlas

- Started in 1998 with NASA Funding
 - Originally the Digital Galaxy Project
- Curated Package of 3D Astrophysical Datasets
 - Nearby Stars (Hipparcos/Tycho star catalogs)
 - Milky way galaxy
 - star clusters, nebulae, extrasolar planets
 - Extragalactic galaxies, quasars, etc.
 - Tully Galaxy Catalog
 - Sloan Digital Sky Survey and others...
 - Multispectral Sky, WMAP, etc.
- Used by Multiple Digital Planetarium Vendors
 - Uniview
 - E&S's D3
 - Sky- Skan's DigitalSky

AMNH's Digital Universe Atlas

Curated datasets for 3rd-party digital planetariums

Carter Emmart, Director of
Astrovisualization at the American Museum
of Natural History's Rose Center for Earth
and Space

Model of the Known Universe (MotKU)

- Proposed Collaboration of Leading Institutions
 - Universities, science centers, programs
 - Multi- agency funding: NASA, NSF, UNESCO, ESA, etc.
- Curation of Scientific Datasets and Simulations
 - Geospatial, planetary, galactic, extragalactic
 - Biological, biomedical
 - Microscopic, particle/ quantum physics
 - World heritage sites
 - Participation could be mandated by funding agencies
- Standard Licensing Templates
- Dissemination through Vendor Partners, i.e.
 - Web: Google, Second Life
 - Digital Domes: E&S, Spitz, Sky- Skan, Uniview
 - Academia: OptIPortals
 - Television and Cinema: Film studios

Networked Domes: The DomeGrid

- Uniview's Octopus
 - Collaborative Tour of Satellite Databases
 - Demonstrated at DomeFest 2007: Albuquerque, New York, Sweden
 - Remote control of client rendered data
- CineGrid™ - www.CineGrid.org
 - “Interdisciplinary community focused on the research, development, and demonstration of networked collaborative tools to enable the production, use and exchange of very-high-quality digital media over photonic networks.”
 - Demonstrated real-time 4k x 2k simulcasting
 - Seeking to interconnect digital domes as CineGrid nodes
 - First project: July 2009 Eclipse in China (GOTO)

Networked Domes

The Global Lambda Integrated Facility
*Visualization by Robert Patterson, NCSA/University of Illinois
at Urbana-Champaign
Compilation by Maxine Brown,
University of Illinois
Earth Texture, visibleearth.nasa.gov*

Networked Domes: Telepresence

CMU's Nomad Robot Tested by NASA Ames in Atacama Desert... Live Audience Telepresence

<http://www.cs.cmu.edu/afs/cs/project/lri-13/www/atacama-trek/>

Spaceborne Telepresence

- Permanent Fisheye/ Immersive Camera on the ISS
 - Exterior view of ISS against Earth
 - HD Downlink
- Public Web Access (public participation in space)
 - Virtual camera with pan/tilt
- Full Fisheye Compatible with Fulldome Theaters

Immersive Media's
Dodecahedral Video Camera

www.immersivemedia.com

4. Converge with games, VR and LF cinema.

- Serious and fun game applications for domes
- Leverage VR programming and assets
- Joint standards for LF digital cinema & fulldome

Video Game Education Systems

- **A single video game can reach 10x more people than are graduated annually by the entire US higher-education system in science and engineering.**
- **Students already play games 5-8 hours a day in their spare time.**
- **Video games stimulate substantial dopamine release in the brain that promotes learning.**
- **Initial studies show typically 30% or more improvement of teaching effectiveness for video games over lecture.**
- **Video games employ effective learning paradigms in order to be compelling:**
 - **Experiential learning** - "If you do it, you learn it"
 - **Inquiry-based learning** - "What happens if I do this?"
 - **Self-efficacy** - In games, points, levels, or magic swords are awarded at positive decision points, encouraging players to keep going.
 - **Goal setting** - "You learn more if you work towards a well-defined goal."
 - **Cooperation** - Cooperative or team learning results in a 50% improvement over either solo or competitive learning.
 - **Continuous Feedback, tailored instruction, cognitive modelling** - Tutor-type software can increase TIMSS scores by 30%.

Video Game Tournaments

- Dome Video Game Tournaments
 - Regional, national, international
- Audience as Players
 - Group interactivity using wands, joysticks, etc.
- Audience as Spectators
 - Economic model similar to sports with skilled teams
 - Audiences collaborate to support their team

Images Courtesy de pinxi – www.depinxi.com

Full-dome Theatres and Virtual Reality

Virtual Reality for the Masses...

Virtual Reality Definition

Virtual Reality = Media technologies that immerse the senses sufficiently to replace perception of the ordinary world with a sense of presence in an intentionally manipulated virtual, artificial, or enhanced environment

- Augmented reality and projected information overlays
- Large-format displays and wrap-around screens
- Computer games and interactive spaces

Flavors of Virtual Reality...

Reality-Virtuality (RV) Continuum

Flavors of Virtual Reality...

"Classic" Virtual Reality

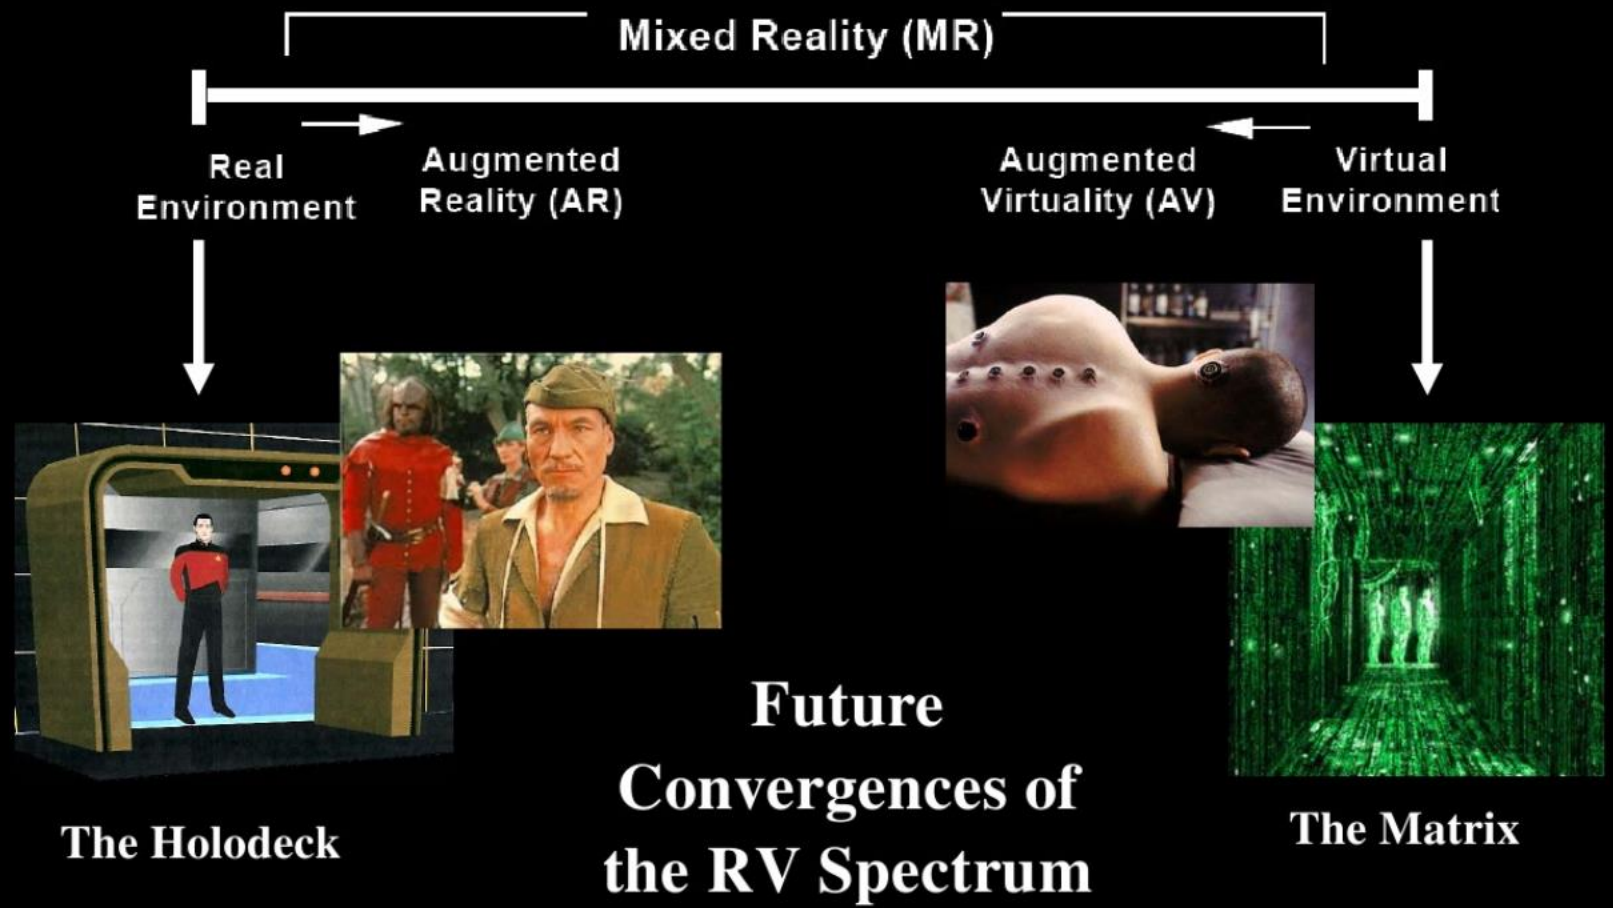

Spatial Immersive Displays

Spatial Augmented Reality

Flavors of Virtual Reality...

Virtual Reality

Courtesy NASA

Courtesy VirtuSphere Corp.

Courtesy Immersion Corp.

Virtual Reality

- Override external sensory inputs
 - Physically isolating, digitally immersive
- User Interfaces Expensive and Encumbering
 - Opaques Out “Real- World”
 - Users oblivious to telephones and other real-world demands
 - Physically isolating yet digitally highly immersive & interactive
 - Long- term usage issues for 3D stereoscopy
 - Low throughput (for entertainment applications)
 - Hygiene issues (for entertainment applications)
- Low adoption rates in real- world applications

Virtual Reality Art

Tree Pond from Osmose
Char Davies
Immersence.com

Summer Stream from Ephémère
Char Davies

- “Immersants” reported:
- Being in another place
 - Losing track of time
 - Unable to speak rationally
 - Euphoria
 - Spiritual experience

"Ephémère can be viewed as an attempt to reaffirm our limitations, our mortality, our dependency on aging bodies and an earth which will, for those of us now living, absorb our bones, dreams of cyber immortality notwithstanding."

- PTSD treatment
- Anxiety disorders
- Addictions
- Eating disorders
- ADHD treatment

The degree of immersion in an interactive VR experience seems to improve its efficacy in medical treatments for phobias and pain, performing better than 2D video games, for instance. - Hunter G. Hoffman, Sci. American, August 2004

Spatially Augmented Reality

Virtual Reflectance

Virtual Illumination

Virtual Motion

**UNC &
Ramesh
Raskar's
Shader Lamps**

Virtual Interaction

Spatially Augmented Reality

- Normal Operation of Sensory Inputs
 - Physically collaborative yet immersive
- Completely Unencumbered
 - Enhances the “real- world”
 - Requires spatial “props” for projection or emissive surfaces
 - limited flexibility, reconfigurability - not “general use”
 - No long- term fatigue issues
 - High throughput (by entertainment standards)
 - No hygiene issues (entertainment applications)
- Potentially high adoption rates in real- world applications

Spatially Immersive Displays

CAVE

Reality Centers

Fulldome Theaters

Domes

Mega-Walls

Wrap-Around Screens

**Personal
Small-Scale**

**Group
Large-Scale**

Spatially Immersive Displays

- Walk- In Immersive Spaces
 - Physically collaborative
- Completely Unencumbered
 - General use immersive projections
 - No long- term fatigue issues
 - High throughput (by entertainment standards)
 - No hygiene issues (entertainment applications)
- Demonstrated high adoption rates in real-world applications

Other Immersive Display Applications

- Theme Parks
- Tradeshows
- Nightclubs
- Concerts
- Dance Parties
- Restaurants
- Spas

Vortex Immersion Media

Advanced Immersive Media Applications

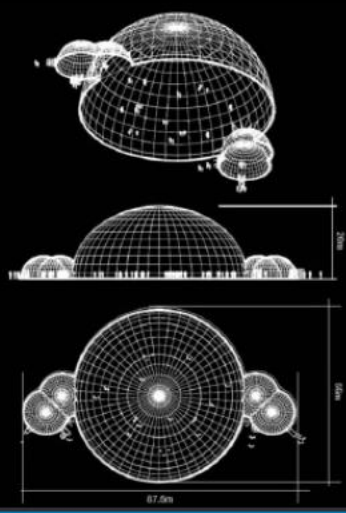

VR Nightclub

Digital Theming

Inflatable Domes

Convergence of Fulldome and Large-Format Film

- Imax Corp. recently sold 180 digital screens
- White Oak Foundation is applying for NSF funding to hold a LF Digital Standards Colloquium
- IMERSA is considering DCI specifications for both fulldome and LF Film specifications
- LF Digital Cinema is basically already compatible with digital planetarium systems
- Fulldome adds real-time interactivity

Digital Dome Theaters

More than a planetarium...

More than a movie theater...

It's a portal into cyberspace,
virtual environments
and the new world of
electronic information.

As an artistic medium,
digital domes are the closest thing to
being inside the artist's head.

Vortex Immersion Media

About the Author...

Ed Lantz is a media and entertainment engineer, inventor, scientist, artist and entrepreneur. He is internationally recognized as a pioneer and leading authority in large-format digital cinema and immersive experiences for mass audiences. Other areas of interest include virtual reality, interactive place-based entertainment, real-time video/music performance, independent films with socially conscious themes, fine art visual music, neuroaesthetics, transformative media and entertainment, celebratory event design and wellness applications exploiting the psychophysical effects of interactive digital media.

Mr. Lantz has a background in hardware and software engineering, quantum physics and electromagnetics. He spent seven years leading photonic signal processing R&D at Harris Corp. in Melbourne, Florida, five years at the Astronaut Memorial Planetarium in Cocoa, Florida leading the development of advanced laser, video and astronomical projectors, and eight years with Spitz, Inc. where he built a team that transformed old-style planetariums into immersive visualization environments. Mr. Lantz founded [Harmony Channel](#) in 2004, a cable and broadband television network delivering mood-elevating digital media that has been described as “MTV for the Soul.” He most recently founded [Vortex Immersion Media](#), a new venture bringing virtual reality experiences to the Las Vegas nightclub environment.

Mr. Lantz has published and presented [numerous papers](#) on VR and entertainment technologies, and is a regular contributor to ACM SIGGRAPH papers, panels and courses. He founded the International Planetarium Society’s [Fulldome Video Committee](#) and the first [Fulldome Standards Summit](#) held in Valencia, Spain in 2004, co-organized the first [Immersive Cinema Workshop](#) in Espinho, Portugal in 2005, and was Keynote Speaker at [Immersive Vision 2008](#) in Plymouth, UK. He received an MS in Electrical Engineering from Tennessee Tech University (1984), serves on the board of the [Center for Visual Music](#), and holds two [US Patents](#) on immersive video-based theater technology.
