# **BODY SYSTEMS QUIZ**

### Liver

- this organ both regulates insulin and secretes enzymes to break down carbohydrates, proteins, and lipids
- o an organ in the body that secretes bile to help digest carbohydrates, fats and proteins.
- either of a pair of oval masses of lymphoid tissue, one on each side of the throat at the back of the mouth

### Heart

- o an organ or group of cells that releases substances or waste from the body
- o the organ that controls the flow of blood in the body
- o the part of the nervous system comprising of the brain and the spinal cord

### Nerve

- o a pair of organs in which oxygen from the air that is inhaled is transferred into the blood
- o an organ or group of cells that releases substances or waste from the body
- o fiber forming part of a system that conveys impulses of sensation, motion, between the brain or spinal cord and other parts of the body

# Cardiovascular system

- o the system of organs and tissues involved in circulating blood and lymph through the body
- o the organ that controls the flow of blood in the body
- the mass of nerve tissue located in the head of animals with spinal cords; it is the center of thought and controls movement

# **Digestive system**

- o the part of the body that stores and processes food
- the system of organs and tissues involved in circulating blood and lymph through the body
- either of a pair of oval masses of lymphoid tissue, one on each side of the throat at the back of the mouth

## Spleen

- o the part of the nervous system comprising of the brain and the spinal cord
- o an organ near the stomach that has various roles in purifying and storing the blood
- o a bitter fluid that helps with digestion

## Bile

- o a movable or fixed place or part where two bones or elements of a skeleton join
- o a bitter fluid that helps with digestion
- o an organ near the stomach that has various roles in purifying and storing the blood

## Intestine

- o the portion of the alimentary canal extending from the stomach to the anus
- the thick column of nerve tissue that extends from the base of the brain about two thirds of the way down the backbone
- o a bitter fluid that helps with digestion

# CNS' or 'central nervous system

- o an organ or group of cells that releases substances or waste from the body
- o the portion of the alimentary canal extending from the stomach to the anus
- o the part of the nervous system comprising of the brain and the spinal cord

### Vein

- a blood vessel that carries depleted blood back to the heart
- the set of organs that allows a person to breathe and exchange oxygen and carbon dioxide throughout the body
- o a pair of organs in which oxygen from the air that is inhaled is transferred into the blood

### Tonsil

- o the fluid that carries oxygen and other elements to the tissues, and carbon dioxide away from the tissues through the heart and vascular system
- o the part of the nervous system comprising of the brain and the spinal cord
- either of a pair of oval masses of lymphoid tissue, one on each side of the throat at the back of the mouth

# Artery

- o an organ or group of cells that releases substances or waste from the body
- o the system of organs and tissues involved in circulating blood and lymph through the body
- o a blood vessel that carries blood away from the heart

### Blood

- the fluid that carries oxygen and other elements to the tissues, and carbon dioxide away from the tissues through the heart and vascular system
- o the system of organs and tissues involved in circulating blood and lymph through the body
- the set of organs that allows a person to breathe and exchange oxygen and carbon dioxide throughout the body

## Gland

- an organ or group of cells that releases substances or waste from the body
- o an organ near the stomach that has various roles in purifying and storing the blood
- o the system of organs and tissues involved in circulating blood and lymph through the body

### **Pancreas**

- the set of organs that allows a person to breathe and exchange oxygen and carbon dioxide throughout the body
- this organ both regulates insulin and secretes enzymes to break down carbohydrates, proteins, and lipids
- the mass of nerve tissue located in the head of animals with spinal cords; it is the center of thought and controls movement

## Lungs

- o a pair of organs in which oxygen from the air that is inhaled is transferred into the blood
- o fiber forming part of a system that conveys impulses of sensation, motion, between the brain or spinal cord and other parts of the body
- o the part of the nervous system comprising of the brain and the spinal cord

## Respiratory system

- o an organ in the body that secretes bile to help digest carbohydrates, fats and proteins.
- the set of organs that allows a person to breathe and exchange oxygen and carbon dioxide throughout the body
- o an organ near the stomach that has various roles in purifying and storing the blood
