

BODY SYSTEMS QUIZ

Liver

- this organ both regulates insulin and secretes enzymes to break down carbohydrates, proteins, and lipids
- an organ in the body that secretes bile to help digest carbohydrates, fats and proteins.
- either of a pair of oval masses of lymphoid tissue, one on each side of the throat at the back of the mouth

Heart

- an organ or group of cells that releases substances or waste from the body
- the organ that controls the flow of blood in the body
- the part of the nervous system comprising of the brain and the spinal cord

Nerve

- a pair of organs in which oxygen from the air that is inhaled is transferred into the blood
- an organ or group of cells that releases substances or waste from the body
- fiber forming part of a system that conveys impulses of sensation, motion, between the brain or spinal cord and other parts of the body

Cardiovascular system

- the system of organs and tissues involved in circulating blood and lymph through the body
- the organ that controls the flow of blood in the body
- the mass of nerve tissue located in the head of animals with spinal cords; it is the center of thought and controls movement

Digestive system

- the part of the body that stores and processes food
- the system of organs and tissues involved in circulating blood and lymph through the body
- either of a pair of oval masses of lymphoid tissue, one on each side of the throat at the back of the mouth

Spleen

- the part of the nervous system comprising of the brain and the spinal cord
- an organ near the stomach that has various roles in purifying and storing the blood
- a bitter fluid that helps with digestion

Bile

- a movable or fixed place or part where two bones or elements of a skeleton join
- a bitter fluid that helps with digestion
- an organ near the stomach that has various roles in purifying and storing the blood

Intestine

- the portion of the alimentary canal extending from the stomach to the anus
- the thick column of nerve tissue that extends from the base of the brain about two thirds of the way down the backbone
- a bitter fluid that helps with digestion

CNS' or 'central nervous system

- an organ or group of cells that releases substances or waste from the body
- the portion of the alimentary canal extending from the stomach to the anus
- the part of the nervous system comprising of the brain and the spinal cord

Vein

- a blood vessel that carries depleted blood back to the heart
- the set of organs that allows a person to breathe and exchange oxygen and carbon dioxide throughout the body
- a pair of organs in which oxygen from the air that is inhaled is transferred into the blood

Tonsil

- the fluid that carries oxygen and other elements to the tissues, and carbon dioxide away from the tissues through the heart and vascular system
- the part of the nervous system comprising of the brain and the spinal cord
- either of a pair of oval masses of lymphoid tissue, one on each side of the throat at the back of the mouth

Artery

- an organ or group of cells that releases substances or waste from the body
- the system of organs and tissues involved in circulating blood and lymph through the body
- a blood vessel that carries blood away from the heart

Blood

- the fluid that carries oxygen and other elements to the tissues, and carbon dioxide away from the tissues through the heart and vascular system
- the system of organs and tissues involved in circulating blood and lymph through the body
- the set of organs that allows a person to breathe and exchange oxygen and carbon dioxide throughout the body

Gland

- an organ or group of cells that releases substances or waste from the body
- an organ near the stomach that has various roles in purifying and storing the blood
- the system of organs and tissues involved in circulating blood and lymph through the body

Pancreas

- the set of organs that allows a person to breathe and exchange oxygen and carbon dioxide throughout the body
- this organ both regulates insulin and secretes enzymes to break down carbohydrates, proteins, and lipids
- the mass of nerve tissue located in the head of animals with spinal cords; it is the center of thought and controls movement

Lungs

- a pair of organs in which oxygen from the air that is inhaled is transferred into the blood
- fiber forming part of a system that conveys impulses of sensation, motion, between the brain or spinal cord and other parts of the body
- the part of the nervous system comprising of the brain and the spinal cord

Respiratory system

- an organ in the body that secretes bile to help digest carbohydrates, fats and proteins.
- the set of organs that allows a person to breathe and exchange oxygen and carbon dioxide throughout the body
- an organ near the stomach that has various roles in purifying and storing the blood
